Structure Lateral side of the leg. The deep fibular nerve is the nerve of the anterior compartment of the leg and the dorsum of the foot. It is one of the terminal branches of the common fibular nerve. It corresponds to the posterior interosseus nerve of the forearm. It begins at the lateral side of the fibula bone, and then enters the anterior compartment by piercing the anterior intermuscular ...

Deep fibular nerve - Wikipedia

The ulnar nerve then travels alongside the ulnar bone of the forearm into the wrist. As the nerve descends into the forearm, it stays medially above the flexor digitorum profundus and under the flexor carpi ulnaris giving branches to these muscles. In the lower part of the forearm, the ulnar nerve lies lateral to the flexor carpi ulnaris muscle and medial to the ulnar artery.
