As the core technology behind Descend's 3XR Architecture, its passive bass radiators enable the DN10 to play as loud and low as a 12" ported sub without unwanted port noise distortion. Passive radiators also deliver a smooth frequency response like a sealed sub, but with the port-like ability to play louder and lower in a smaller enclosure.

Low-Pass Crossover is the frequency where your subwoofers will start working to reach deep notes that aren't possible for the speakers that we have today. Typically, a low-pass crossover is anywhere from 40Hz and could go up to 60Hz to 100Hz. High-Pass Crossover is the frequency above the low-pass crossover where your speakers will start working and take over from a subwoofer.

What Is USB-C Alt-Mode? USB-C Alternate Modes (or Alt-Modes) are optional features that hardware manufacturers can implement into their devices to support a wider range of data protocols for direct connection to peripherals (usually displays) without needing active adapters. USB itself carries packetized data which natively supports things like file transfers and keyboard activity.
