Emd 645 E8 Diesel Engine

The EMD 645 is a family of diesel engines that was designed and manufactured by the Electro-Motive Division of General Motors. While the 645 series was intended primarily for locomotive, marine and stationary engine use, one 16-cylinder version powered the 33-19 "Titan" prototype haul truck designed by GM's Terex division. The 645 series was an evolution of the earlier 567 series and a precursor to the later 710 series. First introduced in 1965, the EMD 645 series remained in production on a by-

EMD-12-645E8 engines and one gen set

The 2,250 hp came from two 12 cylinder model 567B engines, each driving a generator to power the two traction motors on one truck. The E8 was the ninth model in the line of passenger diesels of similar design known as EMD E-units. Starting in September 1953, a total of 21 E8As were built which used either the 567BC or 567C engines.

EMD "645" Engine. The Electro-Motive Division's model 645 prime mover further advanced the builder's dominance in the locomotive marketplace. The diesel engine was born from a need to offer increased horsepower since the reliable model 567, which had been in production since 1938 and finally reached the limit of its capabilities. The new prime mover was first tested in the early 1960s and with this success entered production a few years later.

The General Motors EMD engine line is typical of the two-stroke diesel breed. These engines were introduced in the 1930s and power a large number of the diesel locomotives found in the United States. There have been three successive series in the EMD line: the 567 series, the 645 series, and the 710 series. The numbers refer to the number of cubic inches per cylinder, with a typical engine having 16 cylinders (for a total displacement on the order of 10,000 cubic inches!).
