This also can occur when the fiber is bent in a tight radius (less than, say, a few centimeters). Bend sensitivity is usually expressed in terms of dB/km loss for a particular bend radius and wavelength. Figure 4. Numerical aperture depends on the angle at which rays enter the fiber and on the diameter of the fiber's core.

Fiber optics support a higher capacity. The amount of network bandwidth a fiber cable can carry easily exceeds that of a copper cable with similar thickness. Fiber cables rated at 10 Gbps, 40 Gbps, and 100 Gbps are standard.; Because light can travel for much longer distances over a fiber cable without losing its strength, the need for signal boosters is lessened.
